- 🏰 **Address**: Da Nang, Viet Nam

🙋‍♂️Brief introduction

> Hi, I'm a software engineer, a blogger with a desire to start-up

I wrote my first app when I was 20. The little app quickly helped me earn *1000$* in just 3 days. Since then, I've been an engineer professionally for 4 years, worked as a front-end engineer at 3 companies, along with a few side projects.

Thanks to that, I have experience in front-end and back-end.

I am currently a mentor owning 2 online courses about websites with more than 800 students.

👨‍💻Work experience

IT mentor

Self-employed, Viet Nam, Feb 2021 - Now

After working full time for over 2 years as a front-end developer, I wanted to try my hand at education. I quit my job and started devoting full time to developing high-quality online courses. Courses include Master Javascript and ReactJs Super. My courses have helped more than 800 students master practical programming knowledge and this number is constantly increasing every day.

Along with that, I also try to build a prominent personal brand in the programming community.

I have used React, Javascript, Node.js, MongoDB and Github to develop the courses.

Front-end Web Engineer

KMS Technology, Vietnam, September 2021 - April 2022

KMS Technology is a software technology company in Vietnam with over 1000 employees in the US and Vietnam. The company won the Top of the best places to work in Vietnam. The company's outstanding products such as QASymphony, Kobiton, Katalon,...

I am a senior front-end developer for the GoFan project - an event organization platform for schools in the US. My day job is progress reporting, functional analysis, UI code, logic and test writing.

We use React, Typescript, Java, Bitbucket, Jira and AWS for product development.

Because I wanted to pursue my dream of self-employment and freelance work, I asked to leave the company.

NeoLab, Viet Nam, Aug 2019 - Feb 2021

NeoLab is a Japanese technology company based in Vietnam, specializing in software outsourcing and development of technology products.

I work for the company as a front-end engineer building the UI for the Keirin 250 website, a Japanese betting platform related to bicycle races. I have fulfilled my role well and left the project to support projects that are lacking in personnel in the company such as Drone (a platform for applying drones to life) and Jinji (a digital smart contract platform).

We used React, Typescript, PHP, Postgresql, Bitbucket, Jira and AWS for product development.

Here I also have seminars to share technology for the team to discuss and find the optimal solutions for the products.

RionLab, Viet Nam, 7/2018 - 7/2019

RionLab is a startup in Vietnam specializing in software outsourcing and developing blockchain technology products.

I joined the company as a front-end engineer specializing in creating crypto exchange interfaces. Products that I develop include landing pages, admin pages, and trading platforms. I also developed a human resource management system for the company that serves timekeeping and salary calculation every month. Here I developed my personal skills quite quickly but I also left the company after that.

We used Angular, Typescript, Node.js, Firebase, Ethereum, AWS for product development.

I also have technology sessions here to improve performance and improve code quality.

👔Side projects

Blog About Software Engineering

I write about technical programming, open-source, and life. My aim is to help other engineers, create relationships, build community. So far my blog has 100k+ views.

I previously wrote on xdevclass.com, but recently migrated to duthanhduoc.com.

Web Programing Courses

In the process of learning web programming, I realized the difficulties that I and other programmers often encounter. Therefore, I have developed courses to help students easily master the background knowledge as well as get quality final projects to apply for jobs. The courses were carefully invested in my knowledge and were one of the best courses on the market at that time. There are more than 100 students from Vietnam as well as abroad participating in these courses.

I used Javascript, React, MongoDB, Node.js to build the product.

App automatically order ICO

This is a small app for scheduling ICO purchases of digital currency-related coins. It was in 2017 when the crypto trend was exploding and the demand to buy crypto was high, I developed an app to support automatic and mass ICO buying on different accounts.

This App quickly helped me earn 1000$ in 3 days at that time and got offers to work for tech companies. I was also written about this event by the economic newspaper Cafebiz.

I used Javascript to build the product.

🔧Skills

🔡Programming Languages

Javascript, TypeScript.

I'm quite confident that I can catch up with other languages when needed very fast.

💻Web Front-end Technologies

React, Angular, Vue, Next.js, Nuxt.js, Gatsby, Styled Components, Sass, Webpack, HTML5, CSS3.

(I haven't used Angular for a while)

🧮Web Back-end Technologies

- Protocols: REST, HTTP(S)
- Frameworks/Libraries: Node.js, Express.js
- Databases: MongoDB, Firebase
- Cloud Services: AWS (EC2, S3, CloudFront), Vercel, Netlify

(I haven't used AWS for a while)

🔨Dev Tools

Git, Docker, Github, Gitlab, Jira, Figma, VS Code, Bash

💁🏻‍♂️Industrial & Interpersonal Skills

Mentor, write, present, teamwork, SEO, digital marketing.

🥇Honors & Awards

- End of term scholarship (2019)
- First semester scholarship (2018-2019)

📚Education

Software Engineering

Danang University of Science and Technology - Information security, 2014 - 2019

💋Languages

- **English**

Read and understand specialized documents. Good communication.

- **Vietnamese**

Native speaker.
